1 MODEL OVERVIEW

1.1 DESCRIPTION

- A School is any institution at which instruction is giving in a particular discipline.

1.2 REFERENCES

- 3D_Model_Development_Process.docx
 - The 3D model development process details Dignitas Technologies' procedure for building 3D models.

Figure 1 School Model (Unity Render)

1.3 MODEL VERSION AND HISTORY

Information about the model version can be found in the “Model_Version.txt” file located in the model’s directory (same directory the model’s .fbx file is located).

Table 1 Model Revision History

Version	Description	Date
1.0	Initial release of the School	03/15/2017

1.4 MODEL SUMMARY

Table 2 Model Summary

Model Name	School.fbx
Unity Package	School.unitypackage
Model Units	Meters
Coordinate System	Cartesian X, Y, Z (see Figure 2 below)
Model Origin	Origin is located at center mass. (0, 0, 0) (See figure 2 below)
Model Orientation Runtime	Forward: Positive Z Up: Positive Y
Model Orientation Maya	Forward: Positive Z Up: Positive Y

Figure 2 School Origin on Cartesian X, Y, Z Coordinate System (Maya Software Render)

This model was imported into Unity 5.5 to verify the model (see Figure 3 below).

Figure 3 School – Overhead view from Side A (Unity View)

Figure 4 School – Side C (Unity View)

Figure 5 School – Side A and D (Unity View)

Figure 6 School – Courtyard (Unity View)

Figure 7 School – Auditorium (Unity View)

Figure 8 School – Gym (Unity View)

Figure 9 School – Typical hallway (Unity View)

Figure 10 School – Typical classroom (Unity View)

2 UNITY PACKAGE

2.1 IMPORTING THE UNITY PACKAGE

1. Download the “School.unitypackage” file from Google Drive or Bit Bucket.
2. Open the “CCDMMAI” Unity Project in Unity 5
3. In the top menu bar go to “Assets → Import Package → Custom Package...”
4. A window should pop up showing you the contents of the Unity Package being imported
 - a. This Unity Package should look like this:

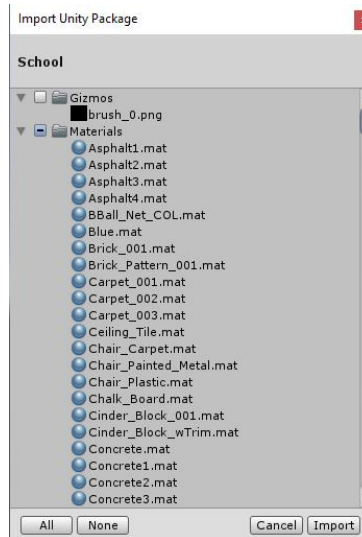

Figure 11 Unity Import Package

5. Press “Import” and the model and materials will be placed into the Assets section.
6. Make sure that when dragging in the model that you select all of the Prefabs instead of the FBXs as the prefabs have the materials stored on them correctly.
7. Make sure that the prefab is dragged into the hierarchy instead of directly into the scene to make sure that the transforms are correct.

3 MODEL ATTRIBUTES

3.1 POLYGON ALLOCATION

Polygon allocation is the number of triangles and vertices for a given state and Level of Detail (LODs) in the model. The method for calculating the number of polygons is to gather each model state then count the polygons present in each representation. Animations are not included in the polygon allocation. The School model has a single LOD which is labeled LOD0.

Table 3 Polygon Allocation

Model	# of Triangles	# of Vertices
School	539657	316601

3.2 LEVEL OF DETAIL (LODS)

TBD

3.3 TEXTURE MAPS

For most models in this scene we used tileable textures, most of which comprise of diffuse, normal, metalness, and specular maps. For the materials that use specularity, the spec maps are found in the Alpha Channel of the Metalness maps.

1. Texture Map Formats – JPG, PNG, TGA
2. Texture Map Types – Diffuse, Normal, Metalness, Specularity
3. Average Texture Map Sizes – 2048 x 2048

3.3.1 DECALS

Decals are used for the grime and damage details. These decal materials are fully customizable as far as color, opacity, normal maps etc. Each decal is a separate object that can be moved, deleted, hidden or copied. Feel free to modify as needed.

3.3.2 TERRAIN

This environment uses a Unity Terrain skin which comprises the grass, pavement, and trees in the scene.

To manipulate the Terrain select it from the hierarchy in Prefab_Warehouse -> Terrain, or by simply clicking on the Terrain skin twice in the viewer.

In the Inspector you will see the Terrain panel. The Terrain toolbar has 7 buttons on it as seen in Figure 10 below.

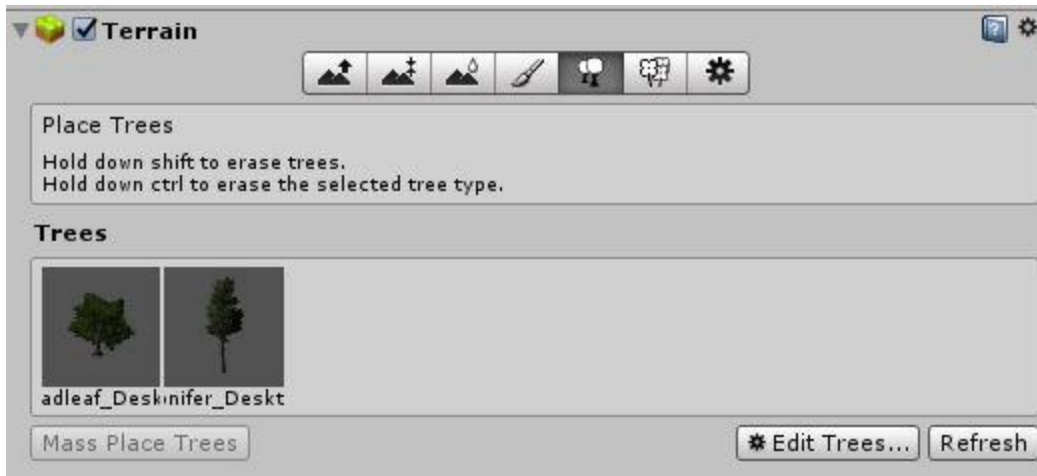

Figure 12 Unity Terrain Panel

The button that is selected is for the trees. To remove pre-existing trees from the scene just click the tree type and hold down shift to paint them out.

3.4 SENSOR VIEWS

N/A

3.5 MODEL STATES

N/A

3.6 SKELETAL STRUCTURE

N/A

4 ANIMATIONS

N/A

5 VERIFICATION APPROACH

5.1 RUNTIME SYSTEMS

The 3D model was tested using the following tools:

- Unity 5.5.1

6 LIMITATIONS

N/A
